

JASMINE QUACH

ABOUT ME

As a natural tinkerer, I can't stop creating in some form or way. I love nothing more when my creations come to life. I started coding as a hobbyist when I was fourteen years old by designing custom myspace and xanga layouts. I spent hours on these layouts, the possibilities were endless and I had so much fun doing it. I was yearning for a more creative career and decided to revisit a past hobby. Programming has been another creative outlet that is fun and addictive!
