

JASMINE CAIN

Full-Stack Software Developer

ABOUT

As a full-stack software developer, with a background in accounting and design, I've been able to merge the two by solving UX and analytical problems. Though I still have plenty to learn, I've grown to enjoy resonating with end-users through thoughtful user flows, just as much as I like solving complex backend problems.

While seeking to take the next step in software development, I aim to contribute to a team, provide value, and continue learning and growing in both front and backend concepts.
