JASMINE QUACH-CAIN

Former fashion design student turned Accountant, and finally returning to school for Software Development after craving more of a creative and fulfilling career. I view Software as another creative outlet that is challenging, yet fun and addictive.

From a young age, my curiosity got the best of me, which lead me to coding Xanga/Myspace layouts as a hobby and feeding my creative side.

Additionally, my background and experience ranges from small business, accounting, and management, to repairing iPhones and related hardware, graphic design, and some WordPress.
